

CONNECTED CARE ECOSYSTEM

HEALNEXUS

AI-Powered Continuity of Care

Connecting Patients, Doctors & AI Beyond Hospital Walls.

📄 **AI ASSISTS. DOCTORS DECIDE.**

Vishesh Shah • Aaditya Shah • Nirma University

A connected care experience that keeps patients supported, clinicians informed, and caregivers aligned from hospital to home.

Built for continuity, collaboration, and smarter decisions across every stage of recovery.

HEALNEXUS

Shared Care Platform

PATIENT

Recovery journey

DOCTOR

Clinical oversight

CAREGIVER

Daily support

ASSISTIVE AI

Context-aware support

HEALNEXUS as the central care platform connecting every role in one continuous loop.

The care gap starts after discharge

Healthcare is episodic. Recovery is continuous.

01

01 HOSPITAL

Treatment complete, ready for discharge

02

02 DISCHARGE

Care plan handed off to patient

03

03 HOME

Patient alone, limited support

04

04 THE GAP ⚠

Fragmented care, no visibility

📋 FRAGMENTED CARE

- Medication adherence unclear
- Patient questions unanswered
- Recovery signals missed
- Doctor visibility lost
- Caregiver in the dark

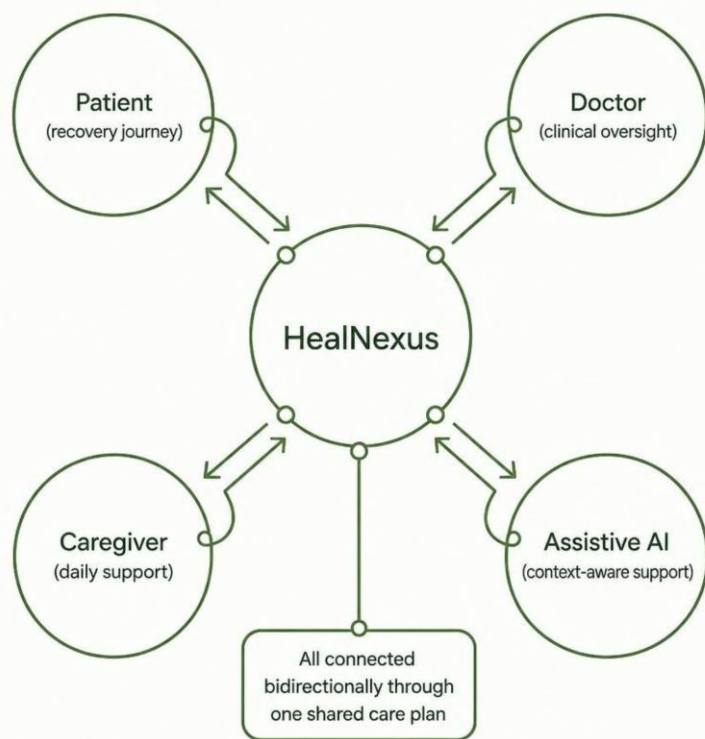

⊗ CONSEQUENCE

- Preventable readmissions
- Delayed intervention
- Poor recovery outcomes
- Patient anxiety
- Broken care loop

The problem isn't one missed message. It's a broken care loop.

One connected care loop

One shared context. Multiple roles. One care loop.

✓ **Shared Context**

One care plan, visible to all stakeholders simultaneously

✓ **Multiple Roles**

Tailored dashboard views per user

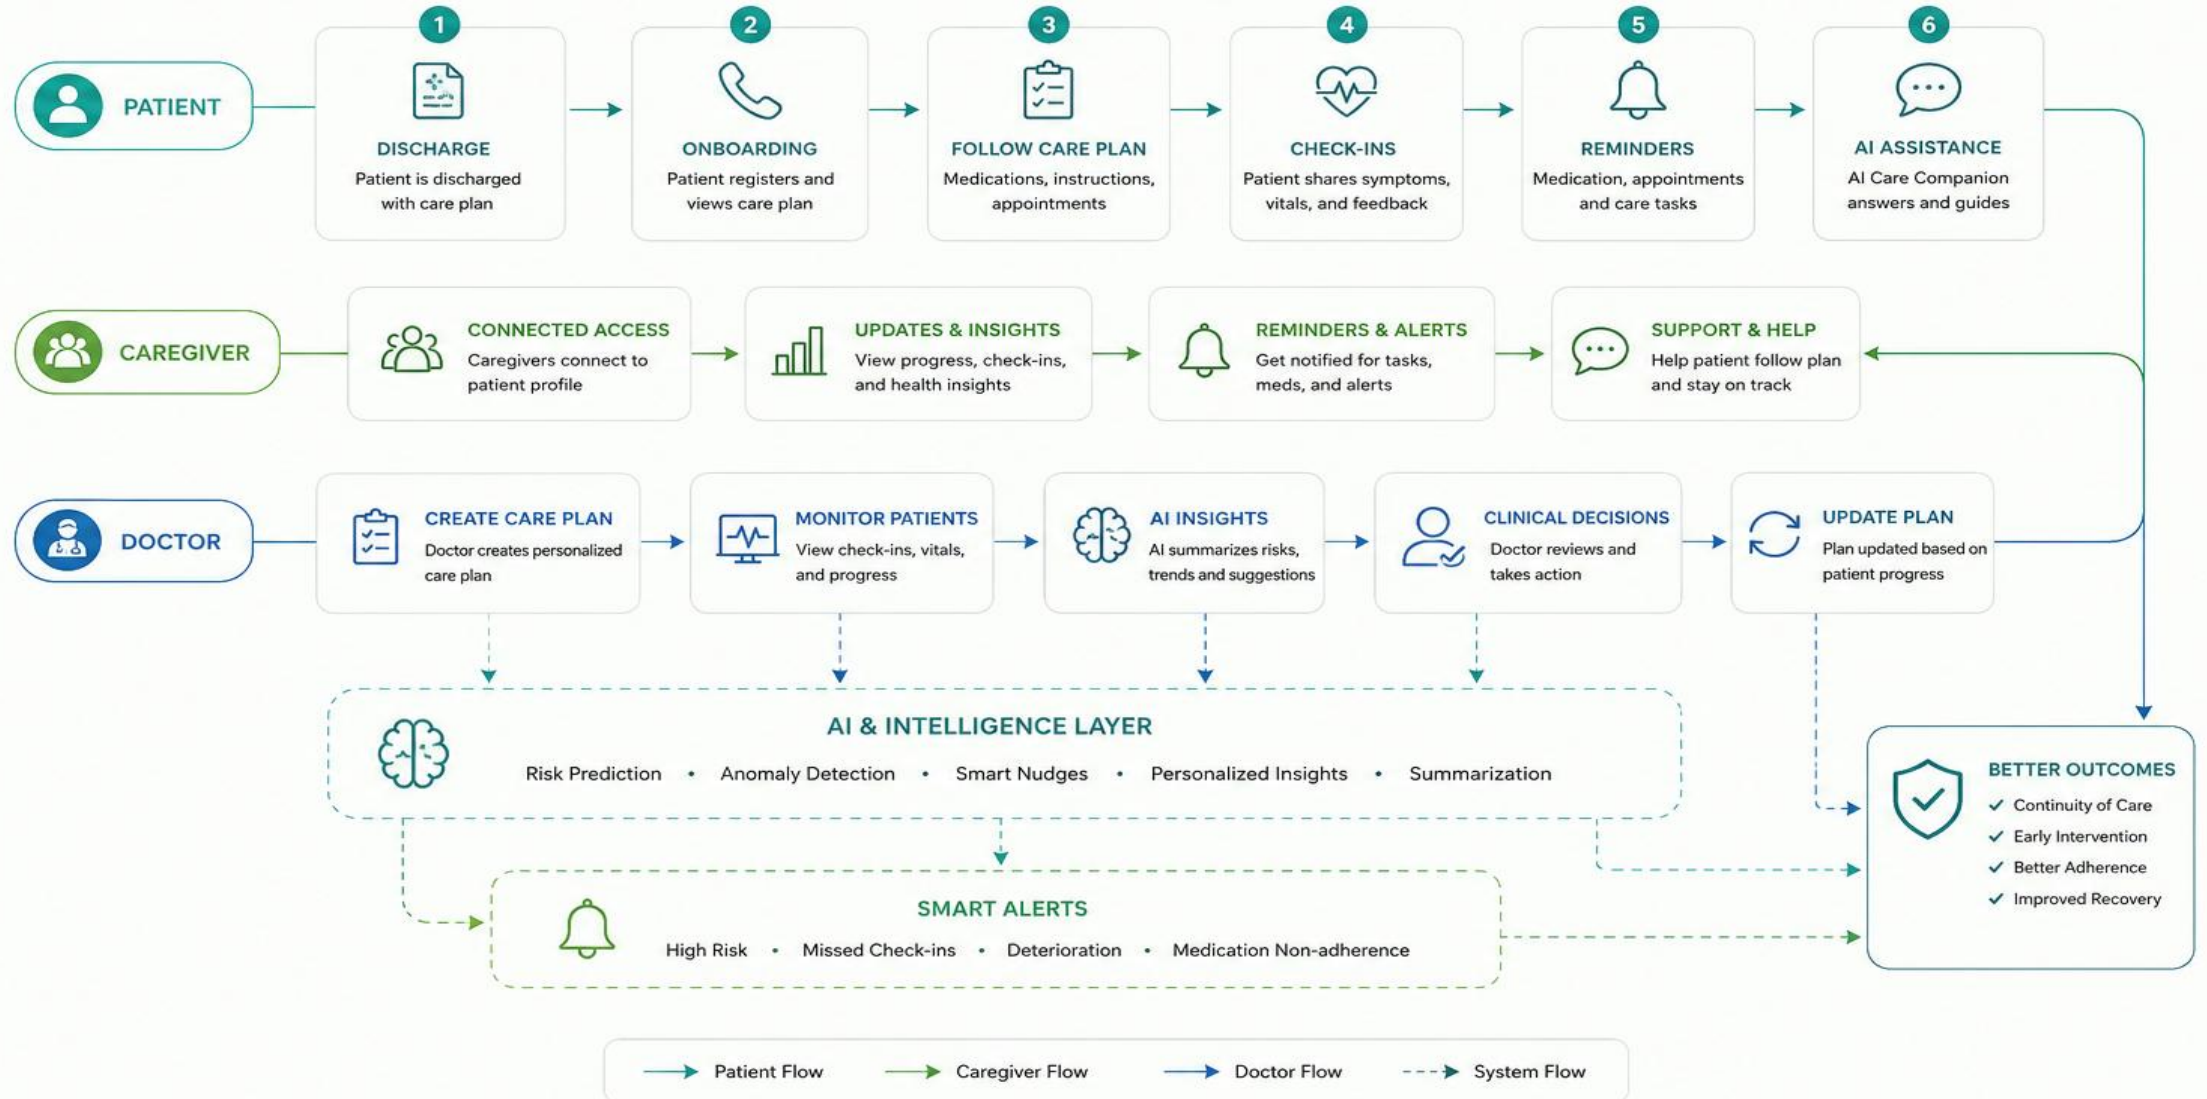

✓ **Continuous Visibility**

Real-time recovery signals surface to the right people

Architecture

Workflow

Three roles. One product language.

Tailored dashboards, consistent design system.

PATIENT

Recovery Score

82

Status: **Stable**

Next Check-in: **Today, 6 PM**

Care Plan: **3 active items**

DOCTOR

Priority Queue

Alerts: **2 flagged**

Active Patients: **5 in context**

Health Signals: **Real-time data**

AI Drafts: **Review & Approve**

CAREGIVER

Recovery Status

Status: **On track**

Medication: **Next: 2 PM**

Active Alerts: **None active**

Visibility: **Full access**

Consistent UI design system across all roles • Role-based access control • Real-time synchronization

A modular AI health platform

Scalable, secure, and built for healthcare from the ground up.

Technical architecture flow

User Experience

React · TypeScript · Vite

Data & Backend

Supabase · PostgreSQL ·
Realtime · Row Level
Security · Local Store

AI / ML

Python · FastAPI ·
XGBoost · **OpenRouter** ·
Exa

Security First

Row-level security,
encrypted data, HIPAA-
ready architecture

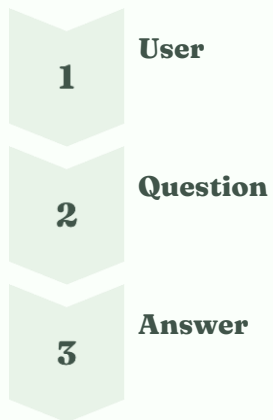

Offline-First

Local store fallback for low-
connectivity environments

More than a chatbot

Most AI assistants answer questions. HealNexus connects the care loop.

Generic AI

Stateless. No context. No follow-up. No care team in the loop.

One-off responses

Answers end the interaction instead of improving the next one.

No longitudinal memory

Each prompt starts fresh, with no patient history or care continuity.

HealNexus

01

Patient Context

02

AI Assistance

03

Health Signal

04

Smart Alert

05

Doctor Review

06

Care Action

Contextual. Integrated. Doctor-controlled.

Continuous signal loop

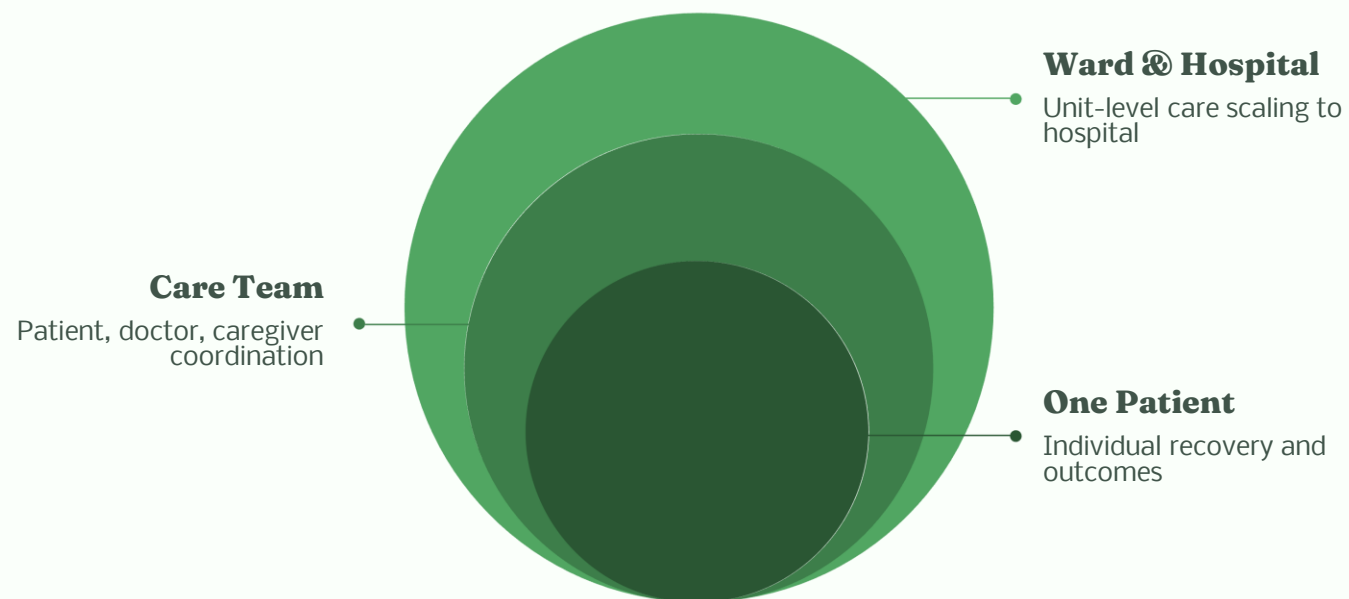

Patient data, AI interpretation, and clinical review stay connected.

Care that compounds

Every interaction can trigger an alert, a review, or a next best action.

Designed to extend beyond one patient

From individual recovery to a full health ecosystem.

Multi-Role

Patient · Doctor · Caregiver · Rural Worker

Multilingual

English · Hindi · Gujarati

Realtime

Supabase realtime synchronization across all roles

Modular AI

AI services independent of core app

Offline-First

Low-connectivity rural workflows supported natively

Extensible ML

Expandable predictor capabilities as data grows

From conversation to care support

AI-assisted workflow that keeps doctors in control – always.

PATIENT INTERACTION

🗨️ “I've been feeling unusually tired today.”

Recovery Stage – current phase and expected progress

Care Plan – goals, medications, and guidance

AI CARE COMPANION

AI PROCESSING

AI analyzes context and identifies health signal

CARE-PLAN DRAFTS

DOCTOR REVIEW

⚠️ Recovery signal requires review

Priority – flagged for timely review

AI Suggestion – recommended next step for clinician review

Doctor Review

Approve / Modify

Care Action

SMART ALERTS

⚠️ ⚠️ AI-generated outputs are assistive and require appropriate professional review.
